Submandibular gland - Wikipedia

The submandibular gland accounts for 80% of all salivary duct calculi (salivary stones or sialolith), possibly due to the different nature of the saliva that it produces and the tortuous travel of the submandibular duct to its ductal opening for a considerable upward distance. The submandibular gland is one of the major three glands that provide the mouth with saliva.

Bleomycin | C55H84N17O21S3+ - PubChem

The liver histology of bleomycin hepatotoxicity has not been well characterized, but it

causes hepatic steatosis in animal models. In a single case report, biliary strictures and a sclerosing cholangitis-like syndrome was described arising several years after intra-arterial embolization of a large hepatic hemangioma with bleomycin.
