Nottingham

This section is made up of eight topics, which are detailed below. Each topic covers a fundamental principle in reactor design, also how

students can combine those principles to derive/optimize the reactor design equations. The textbook Fogler, H. Scott "Elements of chemical reaction

engineering", 4th ed.,
Prentice Hall, 2005 is
closely followed.

Foundation ...

Design Thinking is a design methodology that provides a solution-based approach to solving problems. It's extremely useful in

tackling complex
problems that are ill-
defined or unknown,
by understanding the
human needs
involved, by re-
framing the problem
in human-centric

ways, by creating many ideas in brainstorming sessions, and by adopting a hands-on approach in prototyping and

testing.
