Poisson distribution - Wikipedia

Definitions Probability mass function. A discrete random variable X is said to have a Poisson distribution, with parameter λ , if it has a probability mass function given by: $P(X = k) = \frac{e^{-\lambda} \lambda^k}{k!}$, where k is the number of occurrences ($=, \dots$); e is Euler's number ($=!$ is the factorial function.); The positive real number λ is equal to the expected value of X and also to its variance.

Learning nonlinear operators via DeepONet based on the ...

18/3/2021 · a, For the network to learn an operator $G : u \mapsto G(u)$ it takes two inputs $[u(x_1), u(x_2), \dots, u(x_m)]$ and y . b, Illustration of the training data. For each input function u , we require that we ...
