## **Analog circuits - Semiconductor Engineering**

You can make analog circuits by  
soldering discrete components on a  
breadboard more easily than making

a digital circuit on a breadboard. Although integrating that analog circuit onto a chip puts all those components onto one substrate just as with a digital integrated circuit, the analog ICs are notoriously hard to design well and require a different approach, much of which stems ...

**Plasma technology in  
antimicrobial surface engineering**

...

4/1/2022 · Currently, there are  
different approaches capable to help  
in reducing possible bacterial surface

attachment and biofilms growth. As plasma-based methods are typically applied to modify the top layer of materials, here we will classify the surfaces based on the mechanism they provide to remove bacteria, suppress bacterial growth, or kill bacteria.

## **Bispecific monoclonal antibody - Wikipedia**

A bispecific monoclonal antibody (BsMAb, BsAb) is an artificial protein that can simultaneously bind to two different types of antigen or two different epitopes on the same antigen. Naturally occurring antibodies typically only target one antigen. Upon development, BsAbs can be manufactured in several structural formats.

## **Edge.org**

We create tools and then we mold ourselves in their image. Seventeenth-century clockworks inspired mechanistic metaphors ("The heart is

a pump"), just as the self-regulating engineering devices of the mid-twentieth century inspired the cybernetic image ("The brain is a computer").
